

HULFT Business Intelligence as a Service

From Zero to Up-to-Date Dashboard in 30 Days

Put an end to data cleansing and spend more time managing your businesses' performance.

Go from 30% to 100% data access with HULFT's enterprise-grade data integration capabilities.

A dashboard that evolves monthly through our change management service included in your subscription.

Extreme data security leveraging a proven enterprise architecture from HULFT and Microsoft.

Pricing at a fraction of traditional BI that is made possible through a SaaS model and a company with international scale.

A Managed Service

The majority of HULFT's customers do not have the staff or the budget to manage a large-scale BI platform, but they have urgent requirements to better understand and measure the performance of their business. HULFT unlocks your essential data with full IT department compliance and serves it up in the dashboard format that your business team requires.

Legacy or Modern Data? No Problem.

The most essential data for BI comes in a variety of formats ranging from the oldest legacy systems to sensor streams coming off of IoT devices in factories. With a library of more than [600 business adapters](#), HULFT can connect to practically any enterprise system or data source.

Leveraging Power BI

We use Power BI because it is the most widely used analytics tool that most business users already have some experience with, and most companies already have a license that enables them to use it immediately. This speeds up the time it takes to create the BI solution and reduces operational costs significantly.

A Trusted Team That Has Seen It All and Done It All

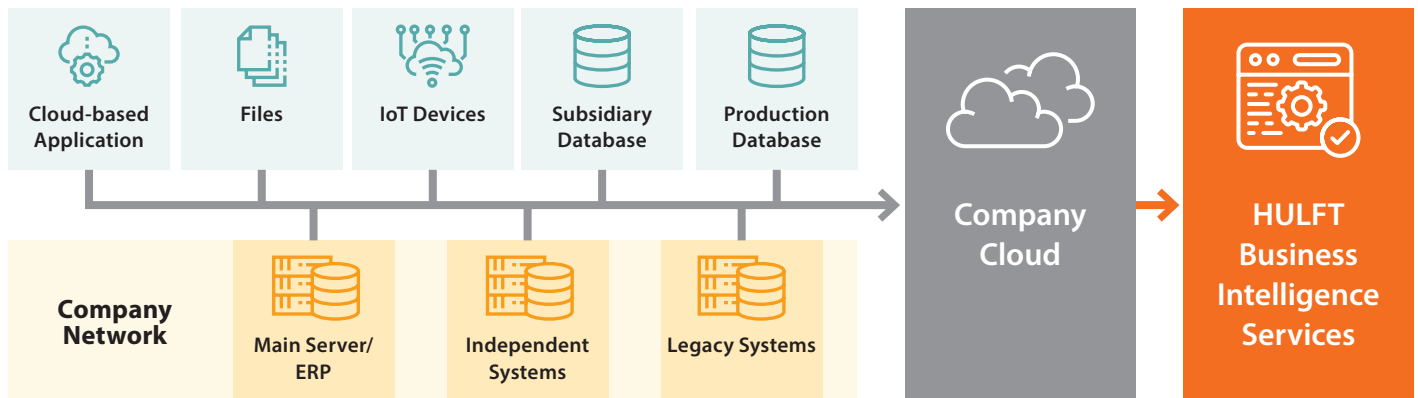

With more than two decades of helping global companies solve the most complex data integration challenges, the [HULFT Professional Services](#) team leverages its best practices through engagements with line-of-business professionals and technical staff. We locate key data sources and transform them into a format that can be consumed by Power BI, and HULFT helps business leaders construct their custom KPI dashboards.

(cont'd)

A Proven Data Integration Platform

Underneath the data visualization layer is [HULFT Integrate's](#) automated, no-code data integration platform. Whereas most data extraction tools require significant manual interaction such as uploading the file, waiting for results, downloading the data, and then manipulating it to the right format, HULFT Integrate connects that data to any internal or external database directly. HULFT maintains a library of more than [600 business adapters](#) — just about any enterprise system or data source you can think of.

Our Onboarding Process

BI Concierge Session Today, Up-to-Date Dashboard in 4 Weeks
